KEY SKILLS

HTML

CSS & SASS

JavaScript ES6

Problem solving

React JS & Typescript

Page Builders & Widgets

Stencil & Handlebars

Adobe Photoshop

Tailwind

GraphQl

Figma

Git

BASIC SKILLS

Alpine JS

Next JS

Wordpress

Firebase / Firestore

Statamic & Antlers

Unit Testing

Bootstrap

JQuery

I'm an enthusiastic Web Developer with 1.5 years industry experience, actively contributing to various e-commerce international retailers. My coding journey began with a successful self-paced boot camp, alongside full-time work, showcasing my proactive, solution-oriented attitude. I have strong organisational and communication skills.

My friendly nature and extensive experience make me a positive asset to a team.

I code responsive websites with a focus on accessibility and aim for DRY code. I consistently seek improvement by staying updated through industry podcasts and videos. Specialising in front-end development, I take pride in visually seeing results.

CAREER

Web Developer (Front End) - Aug 2022 to Present - 5874 Commerce

I collaborate within a dynamic dev team in an e-commerce agency, contributing to a diverse range of projects for international companies. Starting as a Junior, I demonstrated hard work and a continuous drive for improvement, resulting in a promotion after 6 months. My hard work was further recognised when I was honoured with an award for showing real dedication and never giving up.

- Provide client services support by implementing new features, making changes, and resolving bugs on existing sites, as briefed in Jira tickets.
- Create new sites from template code in Stencil & Handlebars.
- Create headless sites integrated with page builders/CMS (Builder IO Big Commerce, Statamic and Wordpress).
- Implement API calls and format returned data, including utilisation of GraphQL.
- Take design XDs and turn them into reality. Ensuring results are pixel perfect and responsive.
- Generate semantic HTML with accessibility considerations.
- Maintain clear communication with Project Managers and Lead Developers, providing updates on progress and flagging blockers.
- Use Fork for version control, creating features and generating PRs.

Code Base: React, Typescript, JS, CSS, Sass, Tailwind, Statamic, Antlers, Handlebars & Alpine JS
Tools: Postman, Fork(Git), Figma, Notion, Adobe XD, Jira & Bit Bucket

Software Development - April 2021 to May 2022 - Nology

A remote course, mainly focused on front-end development using JS and React. Explored back-end including Node JS to create APIs and Firebase for databases and authentication. Unit testing was carried out with Jest, Enzyme and React Testing Library.

I contributed to a live client project, a React web app to help students improve the environmental impact of their food choices. I created a staged form for adding a recipe and styled the menu items. I utilised useForm and Yup Resolver to create and validate the form. The user's input was submitted to Firestore. We used Trello to manage tickets, Figma for the design and GitHub for version control.

Here's some of the projects I created to utilise skills learnt:

- Brew Dog beer finder in React, accessing a public API to render cards for each beer, allowing the user to filter and search results.
- Morse Code translator using HTML, CSS & JS.
- Alien text based game in JS, driven by OOP.
- Calculator, I solved it using various array methods.
- Hangman, a personal project using JS, HTML & CSS.

Project Coordinator - June 2017 to August 2022 - SE Controls

Coordinated the installation of life safety smoke ventilation systems, addressing issues as they arose and working to find efficient solutions. Progressed from the role of Project Administrator to Senior Administrator, ultimately achieving the position of Project Coordinator.

- Scheduled engineers and found solutions to last minute issues and call outs.
- Communicated with colleagues and other departments to ensure smooth running of projects.
- Provided the Directors with forecasted figures for KPI reports.
- Produced commissioning paperwork for customers, ensuring adherence to company guidelines and maintaining a high standard of quality at all times.
- Organised the delivery of products based on technical drawings.

Reception & Admin Assistant - 2009 to 2017 - Blue Cross (animal charity)

A rewarding role where I developed a wide range of skills, including clear communication and problem solving. I developed the centre's operations by providing admin support as well as constantly reviewing and updating systems to improve productivity. We worked as a team to rehome horses in need.

- Provided training and ongoing support to volunteers.
- Organised and coordinated fundraising events, maintaining a calm attitude under pressure.
- Recorded and edited horses' rehoming videos to enhance their chances of finding new homes.
- Increased awareness of Blue Cross by conducting TV/Radio interviews and attending events.
- Finance admin including balancing daily & monthly payments and assisting with annual budgets.
- Built up social media pages, posting content to raise centre awareness and support.

EDUCATION

2019 - ILM Management Workshop Programme - 9 week course teaching management skills

BA(Hons) Interior Architecture and Design - University of Lincoln - Grade - 2:2

A-levels   IT B, Art A, Design B
GCSEs   10 grades A-C, including Maths, English and Science

THINGS I LOVE

If you have any questions then I'd love to hear from you!
